Design, fabrication and installation of steel structures

**Period of execution**

2020-2021

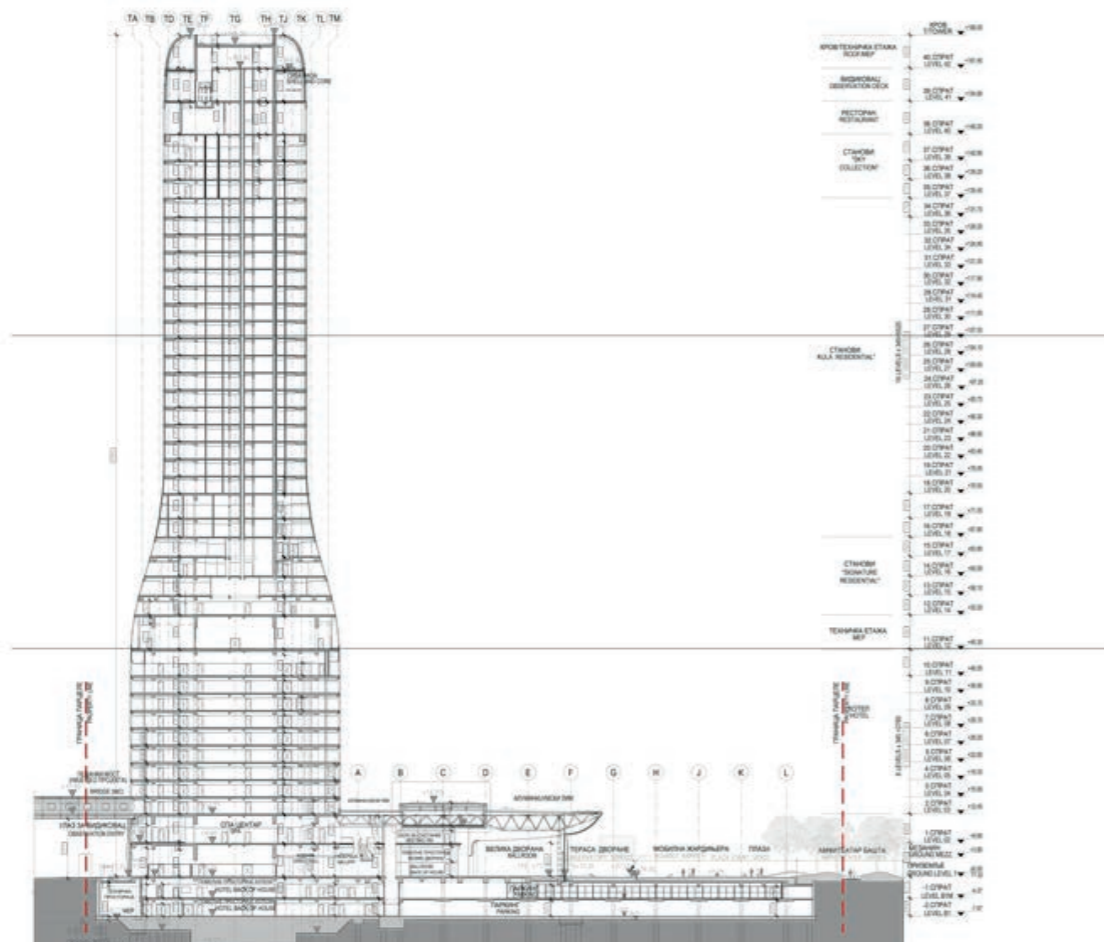

**Weight**

1.050 tons

Kula Belgrade is a 40-floor, 168-meter tall mixed-use skyscraper located in the Belgrade Waterfront on the bank of the Sava River, becoming the tallest building in the country. The tower will have a direct approach to a waterfront promenade, located in close proximity to Belgrade Fortress.

The tower, combining residential, commercial, hospitality and entertainment offerings, is made of concrete presenting steel structures on the podium on the ground floor, on secondary structures supporting the façade and on the top crown located on the top of the tower and developing for its last three floors. The Kula Belgrade tower is the new landmark of the Serbian capital and is part of the 1.8 million square metre Belgrade Waterfront development, featuring world-class residences and offices, hotels, educational institutions, modern

healthcare amenities, as well as a 1.8-kilometre long public waterfront edge and public parks.
